A highlight box has been implemented to showcase the percentage of employed people. The filter applied ensures that the data is limited to the unit "Porcentaje" and excludes both genders ("Sexo not ambos").

In this plot we filter 'tipo\_datos' by 'Dato Base' to see the reason why these trips have been done and their respective date

### 3. A pie chart.

We exclude from the 'Tipo de destino' column 'España' and filter 'tipo de dato' by 'valor absoluto' to show from the total expenses in trips of Spain, which are to go to another community or inside it.

### 4. A bar chart.

We created this bar chart in order to visualize the employed people in Spain by each sector and we colored the sex to see the difference porcentajes.

### 5. A table summarizing results.

In this table we show the ordered months where there are more tourists in Spain, ordered by the 'Total' column.

RANKING OF MONTHS		
In which month there is a greater amount of tourists in Spain due to professional businesses?		
Month	Total	
1. junio	589064	
2. marzo	586826	
3. octubre	577666	
4. octubre	545652	
5. mayo	544991	
6. octubre	525779	
7. abril	514279	
8. septiembre	514014	
9. septiembre	512468	
10. septiembre	507364	
11. junio	502206	
12. mayo	493965

## 6. A map that represents the data by CCAAs.

This map shows the number of trips per community.
